

AI Show Integrity Review

Production-readiness and operating-evidence worksheet

Scene and Cue

Service or workflow: what exact moment is changing?

Operating owner: who owns the outcome after launch?

Guest or business outcome, baseline and value hypothesis.

Workflow and adoption burden.

Consequence tier and prohibited behavior.

Data sources, lineage, quality, timeliness, access and privacy.

Model role and limits.

Human approval, override, escalation and stop rights.

AI Show Integrity Review

Production-readiness and operating-evidence worksheet

Run

Architecture and integration dependencies.

SIT, E2E, regression, performance and security evidence.

Observability, drift, latency, service health and alert ownership.

Rollback, recovery and business continuity.

Vendor and API resilience, concentration risk and exit path.

Review

Adoption and retained use.

Outcome and economic evidence.

Trust, incidents and control coverage.

Learning, reuse and retirement decision.

Production-readiness and operating-evidence worksheet

Production Disposition

RELEASE: evidence supports normal production use.

LIMIT: restrict scope, users, data, automation or operating window.

HOLD: required evidence or controls are incomplete.

ROLL BACK: restore the prior operating state.

RETIRE: value no longer justifies cost or consequence.

Sign-Off

Business owner, technical owner, control authorities and release authority must be explicit.

Use before release, after a material change and after a meaningful operating event.
