CANDIDATE FOR DIRECTOR, ARTIFICIAL INTELLIGENCE TECHNOLOGY | UNIVERSAL ORLANDO RESORT

July 13, 2026

Hiring Committee

Orlando, Florida

Re: Director, Artificial Intelligence Technology

Universal is not hiring this director merely to produce an AI roadmap. After a major resort expansion and the opening of a fourth park, the harder job is to make AI useful across guest, operating and enterprise workflows while ensuring that data, model behavior, human authority, testing, resilience, governance and adoption hold under live conditions.

That is the operating problem my career has prepared me to lead. At Vape-Jet, I direct an AI-first operating transformation connecting production, quality, customer, engineering, ERP, CRM, telemetry and AI-assisted workflows in a software-enabled robotics environment. Through DudeWorth, I have designed AI-readiness and agentic workflow patterns around structured context,

retrieval, human judgment, escalation, evaluation and governance. At Amazon, I built operating mechanisms in a 24/7 customer-backward environment supporting approximately five million second-day orders annually. At Compunetics, I led engineering, manufacturing, quality and technical delivery in high-reliability settings.

I would not present myself as a career ML research scientist or claim a graduate AI degree I do not have. My value is the connective technical leadership around the specialists: framing the right problem, challenging architecture and readiness, clarifying

decision rights, recruiting and coaching strong teams, establishing production and vendor discipline, and linking model performance to service outcomes, trust and economics.

The companion candidate vision at russelldudek.github.io makes that reasoning visible. Its AI Show Contract and Show Integrity Review demonstrate how I would connect business outcome, data and model context, human authority, MLOps and recovery, adoption, and ROI without pretending to know Universal's undisclosed internal processes.

I would welcome a direct discussion about the portfolio Universal needs this leader to inherit, the technical depth already on the team, and the production conditions that currently separate an experiment from a dependable enterprise service.

Carpe diem,

Russell Dudek
